Stroke Recovery and Rehabilitation, 2nd Edition
Joel Stein, MD
Richard Harvey, MD
Carolee Weinstein, PhD, PT
Richard Zorowitz, MD
George Wittenberg, MD, PhD

The definitive core text in its field, Stroke Recovery and Rehabilitation is a comprehensive reference covering all aspects of stroke rehabilitation—from neurophysiology of stroke through the latest treatments and interventions for functional recovery and restoration of mobility. This second edition is completely updated to reflect recent advances in scientific understanding of neural recovery and growing evidence for new clinical therapies. Fully-searchable downloadable ebook included with print purchase.

Clinical Neurophysiology Board Review Q&A
Puneet Gupta, MD, MSE
Pradeep Modur, MD, MS
Srikanth Muppidi, MD, MS

Containing 801 questions and answers, this high-yield, illustrated clinical neurophysiology board review is a comprehensive resource for assessing and refining the knowledge tested on multiple board examinations. Written by authors who are collectively board certified in all of the areas covered, the book is a valuable study tool for candidates preparing for certification or recertification in clinical neurophysiology, neuromuscular medicine, epilepsy, sleep medicine, and neurology. Using structured question formats typically encountered on boards, this Q&A review allows users to assess their knowledge in a wide range of topics, provides rationales for correct answers, and explains why the other choices are incorrect. Includes unique “Pearls for Passing” section for quick review of key facts.

Neurocritical Care Monitoring
Chad M. Miller, MD
Michel T. Torrey, MD

While damage resulting from a primary injury to the brain or spine may be unavoidable, harm from secondary processes that cause further deterioration is not. This practical, clinical resource describes the latest strategies for monitoring the brain after acute injury. With a focus on individualization of treatment, the book examines the role of various monitoring techniques in limiting disability and potentiating patient recovery during the acute phase of brain injury. International experts in diagnosis and treatment of secondary injury explain in detail the current utilization, benefits, nuances, and risks for each commercially available monitoring device as well as approaches vital to the care of brain and spine injured patients.

Neurological Injections: Botulinum Neurotoxin Injection Manual
Katharine E. Alter, MD
Nicole A. Wilson, PhD, MD

The Essential Guide for Clinicians Who Prescribe and Inject BoNTs
This is a detailed and practical guide to botulinum neurotoxin therapy (BoNT) and the wide range of applications for neurological and pain disorders. A unique reference source for new injectors and experienced clinicians alike, this indispensable manual provides information on dose, dilution, and indications for all four FDA-approved toxins in one handy text.

Flora Hammond, MD  James Malec, PhD  Ralph Buschbacher, MD  Todd G. Nick, PhD
With over 80 information-packed chapters, Handbook for Clinical Research design delivers the practical insights and expert tips necessary for successful research design, analysis, and implementation. Using clear language and an accessible bullet point format, the authors present the knowledge and expertise developed over time and traditionally shared from mentor to mentee and colleague to colleague. Organized for quick access to key topics and replete with practical examples, the book describes a variety of research designs and statistical methods and explains how to choose the best design for a particular project. Research implementation, including regulatory issues and grant writing, is also covered.

Neurocritical Care Board Review Questions and Answers
Asma Zakaria, MD
Neurocritical Care Board Review provides clinicians with a thorough review of the complex specialty of Neurocritical Care, using a question-and-answer (Q&A) format. The Q&A format is easily readable, high yield, and serves as good practice for test takers or anyone looking to improve or reinforce essential knowledge. The book contains 657 multiple-choice questions with answers and rationales and covers the key topics pertinent to (and found on) neurocritical care boards. Content is organized according to the exam core curriculum outline.

Pocket EMG
Eric Wisotzky, MD  Dane Pohlman, DO  Victor Tseng, DO
This handy, practical resource designed for quick reference at the point of care covers a wide spectrum of electrodiagnostic tests. Written for both novice and experienced electromyographers, this at-a-glance guide is concise enough to fit in a pocket, yet replete with essential technical detail, pearls, and clinical photos to illustrate proper study set-ups. Contains study protocols for common complaints, normal value ranges for individual tests, and high-yield tables and lists.

Handbook of EEG Interpretation, 2nd Edition
William O. Tatum, IV, DO
A trusted resource for anyone involved in EEG interpretation, this compact handbook is designed for on-the-go reference. Covering the essential components of EEG in clinical practice, the book provides graphic examples of classic EEG presentations with essential text points of critical information to enhance reading skills to aid in improving patient outcomes. Authored by prominent experts in clinical neurophysiology, this second edition is updated to reflect current advances in ICU and intraoperative monitoring and includes new chapters on polysomnography, status epilepticus, and pediatric EEG.

Neuro-Logic A Primer on Localization
Phillip L. Pearl, MD  Helene Emsellem, MD
Neuro-Logic is a foundational text about localization in the nervous system – the fundamental skill of clinical neurology. Written in an easily understandable and entertaining expanded outline format, the book integrates basic neuroscience information, the art of neurological examination, and disease-based knowledge. Over 95 crystal-clear illustrations illuminate topography, anatomic relationships, and clinical concepts. The material in this book is field-tested, and evolved from a syllabus the authors developed over many years of teaching introductory neurology to medical students.

Ultrasound Evaluation of Focal Neuropathies Correlation with Electrodiagnosis
Jeffrey A. Strakowski, MD
With a “how-to” approach, the author meticulously describes the clinical evaluation of the peripheral nerves throughout the body using high-frequency ultrasound. Evaluations include both normal and pathologic findings, as well as discussions of relevant non-neurologic tissue. The book opens with an introduction to ultrasound physics, instrumentation, and image optimization. The remainder of the text is a highly visual tour through the multiple nerves of the shoulder, neck, and upper and lower limbs, focusing on sonographic technique and correct interpretation of findings. Clinical cases that integrate anatomic localization with clinical and electrodiagnostic assessment are incorporated throughout. Also includes a bound-in DVD with live motion video loops of the examinations to correspond with stills in the book to demonstrate the important dynamic information ultrasound provides.
July 2013 • 472 pp
Hardcover • 9781936287673 • $185.00
A broad clinical reference for all members of the care team, Multiple Sclerosis and Related Disorders provides evidence-based data and experience-based guidance for delivering quality long-term care to MS patients. Information on disease history, pathophysiology, and biology is included to provide clinicians with a framework for understanding current diagnosis, monitoring, and treatment strategies for these disorders. In addition to thoroughly reviewing the newest disease-modifying treatments, the authors have devoted significant focus to the symptoms that frequently manifest and their treatment options. Symptoms and functional limitations are the “face of the disease” for patients, and present their own set of challenges for practitioners.

Neurocritical Care Q&A Board Review App
Asma Zakaria, MD

Neurocritical Care Q&A Board Review is a comprehensive interactive self-assessment app for clinicians that are preparing for the Neurocritical Care examination. The first question-and-answer review app in this field, it will help professionals quickly and efficiently review specific topics in Neurocritical Care. The app covers the key topics pertinent to (and found on) neurocritical care boards, and is organized according to the exam core curriculum outline.

Ultimate Q&A Review for Neurology Boards App
Hubert Fernandez, MD
Nelson Hwynn, DO

Ultimate Q&A Review for Neurology Boards delivers the "Ultimate" question-and-answer review experience to your iPhone, iPad, or Touch so you can test your knowledge anywhere, anytime. Covering all subjects tested on the Boards including psychiatry, the app includes over 570 multiple choice questions with answers and explanations. In addition 80 case-based questions with radiologic, electrophysiologic, and color pathophysiologic images are represented in the mix to simulate the full range of question types test-takers will encounter on exam day. Can be used in any setting to prepare for certification, recertification, or in-training exams.

Intraoperative Neurophysiology DVD
Interactive Case Studies
Alan Legatt, MD

Intraoperative Neurophysiology provides an effective, interactive approach to understanding and using clinical neurophysiologic tools to monitor nervous system function during complex surgeries and improve outcomes. 50 challenging cases with a multiple choice quiz module describe techniques for localization, identification, and continuous monitoring, set-up and technical aspects of monitoring, data interpretation, and troubleshooting. Users can proceed at their own pace and reinforce techniques as needed.

Adult EEG, Second Edition DVD
An Interactive Reading Session
Richard Brenner, MD
Mark Scheuer, MD

Now available in DVD and downloadable software for PC, MAC, and iPad, this fully interactive tool has been completely updated, remastered, and expanded. Designed to simulate an actual EEG lab reading session, Adult EEG teaches EEG interpretation to neurology residents, clinical neurophysiologists, neurologists, and neurodiagnostic technologists using more than 200 cases containing over 600 EEGs, and a self-testing section to reinforce learning.

Learn EMG DVD
An Interactive Quiz Approach to Electrodiagnostic Interpretation
Devon I. Rubin, MD

Learn EMG is a fully interactive tool to teach basic concepts and interpretation of electrodiagnostic findings in patients with a variety of neuromuscular conditions. Using a quiz approach and clinical vignettes to make learning both fun and challenging, this unique program teaches users to recognize basic and complex features of individual NCS and needle EMG waveforms and accurately interpret combinations of findings in the context of clinical vignettes.
