Learn How To Guide Patients and Families In Creating And Using A Recovery Plan

Manual of Cancer Treatment Recovery What The Practitioner Needs To Know and Do

STEWART FLEISHMAN, MD, Former Director of Cancer Supportive Services at the Continuum Cancer Centers of New York and the Associate Chief Medical Officer of Continuum Hospice Care-Jacob Perlow Hospice

“This is a nice reminder to health-care providers to focus on recovery even as their patients are just beginning treatment.”

—Doody's Reviews

Manual of Cancer Treatment Recovery guides the practitioner to understand the issues involved in the care of cancer survivors. Manual of Cancer Treatment Recovery teaches the practitioner how to guide patients and families in setting up and using a recovery plan; how to coordinate with other clinicians involved in the patient’s management; and how to develop a directed survivorship program in their practice. Divided into three sections the book covers what one needs to know about survivorship, how to implement effective survivorship care, and how to work with patients utilizing the LEARN System (Living, Education, Activity, Rest, Nutrition), Dr. Fleishman developed. An appendix includes worksheet templates for the provider to give the patient to help in organizing and understanding the recovery plan.
